Issued by: River Forecast Centre, Flow Forecasting

High Streamflow Advisory Update for North Central Alberta

The High Streamflow Advisory has ended for the following streams and their tributaries in the Athabasca River basin:

- **Pembina River**

The Pembina River peaked late Wednesday evening and the river is receding slowly from above-average levels toward normal levels.

Additional information is available from the Forecasters Comments on our website at:

<http://www3.gov.ab.ca/env/water/ws/ForecastersComments/index.html>

A High Streamflow Advisory means that stream levels are rising or expected to rise rapidly and **no major flooding is expected**. Minor flooding in low-lying areas is possible. Anyone situated close to the streams affected (campers, fishermen, boaters and the general public) is advised to be cautious of the rising levels.

A Flood Watch means that stream levels are rising and will approach or may exceed bank full. Flooding of areas adjacent to these streams may occur. Anyone situated close to the streams is advised to take appropriate precautionary measures.

A Flood Warning means that rising river levels will result in flooding of areas adjacent to the streams affected. Anyone situated close to the river should take appropriate measures to avoid flood damage
