

Flood Warning Update for Southern Alberta

A **Flood Warning** remains in effect for the following streams and rivers and their tributaries in the Oldman River basin:

- Oldman River DOWNSTREAM of Oldman Dam (NOT including the City of Lethbridge)
- Willow Creek (including Claresholm)

As of 10 am today, outflows from the Oldman River Dam remain steady at 400 m³/s. Water level at the Oldman River at Fort MacLeod is falling slowly but remains at above bankful level.

Flood Watch for Southern Alberta

The **Flood Warning** has been downgraded to a **Flood Watch** for the following river in the South Saskatchewan River Basin:

- South Saskatchewan River (including Medicine Hat)

The South Saskatchewan River at Medicine Hat peaked June 10th and the current water level is 1 metre below bankfull.

Alberta Environment is monitoring river levels closely and is in close contact with Environment Canada Weather Services. Additional information is available from the Forecasters Comments on our website at:

<http://www3.gov.ab.ca/env/water/ws/ForecastersComments/index.html>.

Flood Watch Update for Southern Alberta

A **Flood Watch** remains in effect for the following streams and rivers and their tributaries in the Bow River basin:

- Highwood River (including High River)
- Bow River downstream of the City of Calgary

High Streamflow Advisory for Southern Alberta

The **Flood Watch** has been downgraded to a **High Streamflow Advisory** for the following streams and their tributaries in the Oldman and Bow River basins:

- Sheep River (including Okotoks, Turner Valley and Black Diamond) – including Three Point Creek
- Elbow River (including Calgary) DOWNSTREAM of Glenmore Dam
- Pincher Creek (including Pincher Creek)
- Little Bow River
- Belly River (including Mountainview and Standoff)
- St. Mary River DOWNSTREAM of St. Mary Dam

These rivers have peaked and they are currently steady or falling slowly. As of 10 am today, St. Mary Reservoir outflows remain steady at 70 m³/s and Glenmore Reservoir outflows have also been reduced from 85 to 76 m³/s.

.....CONTINUED ON PAGE 2

A **High Streamflow Advisory** remains in effect for the following stream and tributaries in the Red Deer River basin:

- Little Red Deer River

A **High Streamflow Advisory** has ended for the following streams and their tributaries in the Milk, Red Deer, Bow, and Oldman River basins:

- Milk River (including Milk River)

- Fish Creek (including Priddis, Calgary)
- Jumpingpound Creek
- Oldman River UPSTREAM of Oldman Dam
- Crowsnest River (including Municipality of Crowsnest Pass)
- Castle River
- Waterton River DOWNSTREAM of Waterton Dam

As of 10 am today, Dickson Dam outflows remain steady at 280 m³/s and Waterton Dam outflows remain steady at 90 m³/s

Additional information is available from the Forecasters Comments on our website at:

<http://www3.gov.ab.ca/env/water/ws/ForecastersComments/index.html>.

A High Streamflow Advisory means that stream levels are rising or expected to rise rapidly and **no major flooding is expected**. Minor flooding in low-lying areas is possible. Anyone situated close to the streams affected (campers, fishermen, boaters and the general public) is advised to be cautious of the rising levels.

A Flood Watch means that stream levels are rising and will approach or may exceed bank full. Flooding of areas adjacent to these streams may occur. Anyone situated close to the streams is advised to take appropriate precautionary measures.

A Flood Warning means that rising river levels will result in flooding of areas adjacent to the streams affected. Anyone situated close to the river should take appropriate measures to avoid flood damage
