
High Streamflow Advisory Ended for Southwestern Alberta

Alberta Environment has ended a High Streamflow Advisory for the following streams and their tributaries which originate in the southern headwaters of the Oldman River Basin:

- **Drywood Creek**
- **Pincher Creek**
- **Castle River**
- **Lee Creek**
- **Belly River**
- **Waterton River upstream of the Waterton Dam**
- **St. Mary River upstream of the St. Mary Dam**

These rivers have peaked and are returning to lower levels.

A High Streamflow Advisory means that stream levels are rising or expected to rise rapidly and no major flooding is expected. Minor flooding in low-lying areas is possible. Anyone situated close to the streams affected (campers, fishermen, boaters and the general public) is advised to be cautious of the rising levels.

A Flood Watch means that stream levels are rising and will approach or may exceed bank full. Flooding of areas adjacent to these streams may occur. Anyone situated close to the streams is advised to take appropriate precautionary measures.

A Flood Warning means that rising river levels will result in flooding of areas adjacent to the streams affected. Anyone situated close to the river should take appropriate measures to avoid flood damage
