
High Streamflow Advisory Update for Central Alberta

A **High Streamflow Advisory** remains in effect for the following streams and their tributaries in the Red Deer River basin:

- **Little Red Deer River**
- **Red Deer River** downstream of Dickson Dam, including Red Deer and Drumheller

The flow of the Little Red Deer River has peaked, but the river level remains high. Water levels on the mainstem of the Red Deer River downstream of Dickson Dam are expected to remain high mainly due to the flow contributions from the Little Red Deer River and other tributaries responding to the recent precipitation.

A **High Streamflow Advisory** remains in effect for the following stream and its tributaries in the Bow River basin:

- **Bow River** including Canmore, Cochrane, Calgary and Hidden Valley

The flow of the Bow River has peaked at the confluence to the Oldman River, but the river level remains high.

High Streamflow Advisories Ended for Central Alberta

High Streamflow Advisories have ended for the following streams and their tributaries in the Red Deer River basin:

- **Raven River**
- **Medicine River**
- **Haynes Creek** (northeast of Red Deer)

The flows of these streams have peaked and they are receding slowly.

A **High Streamflow Advisory** has ended for the following stream and its tributaries in the Battle River basin:

- **Battle River** including Ponoka

The flow of the Battle River has peaked last night near Ponoka and is receding slowly.

Alberta Environment is monitoring river levels closely and is in close contact with Alberta Forestry's and Environment Canada's Weather Services. Additional information is available from the Forecasters Comments on our website at: <http://www3.gov.ab.ca/env/water/ws/ForecastersComments/index.html>.

This advisory will be updated if the situation changes.

A High Streamflow Advisory means that stream levels are rising or expected to rise rapidly and **no major flooding is expected**. Minor flooding in low-lying areas is possible. Anyone situated close to the streams affected (campers, fishermen, boaters and the general public) is advised to be cautious of the rising levels.

A Flood Watch means that stream levels are rising and will approach or may exceed bank full. Flooding of areas adjacent to these streams may occur. Anyone situated close to the streams is advised to take appropriate precautionary measures.

A Flood Warning means that rising river levels will result in flooding of areas adjacent to the streams affected. Anyone situated close to the river should take appropriate measures to avoid flood damage
